

MEDICAL INFORMATION

An essential requirement in the selection process, enabling a candidate to begin training as an air traffic controller, is to obtain the mandatory medical class 3 certificate. It is crucial that air traffic controllers are in the best of health to carry out their work.

If you have suffered or are still suffering from one of the below mentioned health issues, it may result that you will not obtain the compulsory medical certificate class 3. Subsequently you will be unable to begin training as an air traffic controller.

Therefore it is vital that you send us an email to work@skyguide.ch if you suffer from a congenital or a persisting disease, as well as any other medical issues.

If necessary, we shall transmit you the list of the approved FOCA specialists (Federal Office of Civil Aviation), for a medical examination at your own charge.

Hearing

Hearing loss of more than 20dB at any frequencies 500 / 1000 / 2000Hz; respectively 35dB at 3000Hz.

Vision

Colour blindness and/or binocular vision disorder.

The form "Preliminary Eye Examination", must be completed and signed by an ophtalmologist. The values of this form must not be exceeded.
