

ELECTRONIC VFR MANUAL

The eVFR Manual is produced according to the regulation of the Federal Office for Civil Aviation of Switzerland. It contains the relevant information for operating VFR flights within Switzerland and is updated on regular basis. A major part of the manual is aerodrome information with general information on aerodromes, visual approach charts and area charts. The content is licensed to software developers for use in their applications. In this data set, the charts are georeferenced suitable for navigation applications.

- Features
 - VFR manual content in electronic form
 - Visual Approach Charts (VAC) georeferenced
 - Area Charts (georeferenced)
- Application
 - integration with applications
 - charts for navigation with suitable applications
- Benefits:
 - georeferenced charts
 - easy integration in GPS supporting applications
 - high quality charts
